

MongoDB Schema for Egg Price Agent

This module defines the MongoDB schema and connection utilities for storing user queries and agent responses from the Egg Price Agent.

Collection: user_queries

Schema:

- query_id: ObjectId (automatically generated by MongoDB)
- query_text: String (the user's original question)
- response_text: String (the agent's response)
- query_timestamp: DateTime (when the query was made)
- city: String (optional - the city mentioned in the query, if any)
- price_data: Object (optional - structured price data returned)
